**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- 1) This application is in condition for allowance except for the presence of claims 8-12 and 21-37 directed to claims non-elected without traverse. Accordingly, claims 8-12 and 21-37 have been cancelled.
- 2) In claim 2, line 7, recitation "liqht . . ." should be changed into - -light . . . - -.

***Allowable Subject Matter***

1. Claims 1-7 and 13-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 1-7 and 13-20 are allowable because the prior art of record neither anticipated nor rendered obvious that a liquid crystal display having an optical film in which the optical film comprises various related elements as claimed with specific features recited in the claims 1, 2 and 13:

In claim 1, an optical film containing a phase difference film and a linear polarizer contacting the phase difference film so as to transmit light to the liquid crystal panel, the linear polarizer has a light transmittance axis perpendicular to a light transmittance axis of a polarizing plate disposed on the liquid crystal panel, and such optical film is positioned at a bottom surface of the liquid crystal panel, and the linear polarizer is disposed between the liquid crystal panel and the phase difference film as shown in Fig.3;

In claim 2, a linear polarizer directly coated on the phase difference film, and transmits light from a circular polarizer containing cholesteric liquid crystal to a liquid crystal panel as shown in Fig.3;

In claim 13, a forming method for a coating type optical film in which a linear polarizer formed by directly coating liquid crystal on a phase difference film so as to transmits light from a circular polarizer containing cholesteric liquid crystal to a liquid crystal panel as shown in Fig.3.

Art Unit: 2871

The reference Kuntz et al teaches a multilayer structure of an optical film and to prepare the linear polarizer directly on the quarter wave film (QWF) by coating, and such film serves as a substrate, but such reference does not teach using such laminated combination film to transmit light from a circular polarizer to liquid crystal panel. The reference Okawa et al also does not teach how laminated stacks forming such optical film by directly coating.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
